

EXPLANATION	
Where the aquifer is less than or equal to half saturated: Total saturated thickness, in feet	Where the aquifer is more than half saturated: Saturated thickness in excess of 50 percent of the aquifer thickness, in feet
Dry Cells	0 - 20
0 - 10	20 - 40
10 - 20	40 - 60
20 - 30	60 - 80
30 - 40	80 - 100
40 - 60	100 - 142
60 - 82	

Figure 37. Simulated saturated thickness at the end of each stress period where the aquifer is less than or equal to half saturated, and saturated thickness in excess of 50 percent of the aquifer thickness where the aquifer is more than half saturated, using 1997 pumpage extended by county trends but reduced to 90 percent in selected zones.
